

Welcome to 'Introduction to Haskell for Students with Autism'. In this lesson, we will explore the basics of

Next, we will learn about GHCi commands, which start with a colon (:). These commands are not Haskell

We will also discuss the difference between prefix and infix operators. In Haskell, operators like +, -, *, and

Understanding the order of operations is crucial in Haskell. Operations with higher precedence are evaluated

Finally, we will explore how to use the dollar sign (\$) to reduce the number of brackets in expressions. This

Throughout this lesson, we will use clear and structured examples to help you understand these concepts.
